

ACI
Accreditation Canada International
And
Emergency Codes

Kochurani Thomas

What is ACI?

Accreditation Canada, an organization that approves standards of excellence in quality care and services of Canadian health institutions and hospitals. This accrediting body is one of the largest health accrediting organizations in the world.

What is Accreditation?

Accreditation is awarded after successful documentation of compliance with the current standards.

Required Organizational Practices (ROP)

ROP is an “essential practice that organizations must have in place to enhance patient safety and minimize risk.”

ROPs are based on current research and best practice and are effective in improving patient safety.

ROPs are classified into six patient safety areas:

1. Safety culture
2. Communication
3. Medication use
4. work life/ workforce
5. Infection control
6. Risk assessment

SAFETY CULTURE

Create a culture of safety within the organization

ROP:

- accountability for quality
- Patient safety incident management (adverse reporting)
- Patient safety quarterly reports
- Patient safety incident disclosure

COMMUNICATION

Improve the effectiveness and coordination of communication among care and service providers and with the recipients of care and service across the continuum.

ROP:

- Client identification
 - ID Band: Identification band
 - MRN: Medical Record Number
 - 3 V's: Verbal, Visual, Verification
- The 'Do Not Use' list of abbreviations (Dangerous abbreviations)
- Medication reconciliation as a strategic priority
- Safe surgery checklist
- Information transfer at care transitions (transfer of client information at transition points)

MEDICATION USE

Ensure the safe use of high-risk medications

ROP:

- Antimicrobial stewardship
- Control of concentrated electrolytes
- Heparin safety
- High alert medications
- Infusion pump safety
- Narcotics safety.

Antimicrobial stewardship is a coordinated program that promotes the appropriate use of antimicrobials (including antibiotics), improves patient outcomes, reduces microbial resistance and decreases the spread of infection caused by multidrug-resistant organisms.

WORK LIFE/WORK FORCE

Create a work life and physical environment that supports the safe delivery of care and service.

ROP:

- Preventive maintenance program
- Patient safety: education and training
- Workplace violence prevention
- Client flow
- Patient safety plan

INFECTION CONTROL

Reduce the risk of health care-associated infections and their impact across the continuum of care/service.

ROP:

- Hand-hygiene compliance
- Hand-hygiene education and training
- Infection rates
- Infection control guidelines
- Antibiotics prophylaxis during surgery
- Safe injection practices

RISK ASSESSMENT

Identify safety risks inherent in the client population.

ROP:

- Fall prevention and injury reduction
- Home safety risk assessment
- Pressure ulcer prevention
- Venous thromboembolism (VTE) prophylaxis

Emergency Codes

- TRAUMA- 9333
- H.E.R.T (Hospital Emergency Response Team)- 9444
- CARDIAC ARREST- 9555
- FIRE- 9777
- PINK- 9888
- WHITE- 9111

THANK YOU
