

Purpose:

This procedure aims to reduce the risk of exposure to potentially hazardous microorganisms by outlining a safe procedure for dealing with the spillage of blood or other body fluids that may expose the healthcare worker to blood-borne viruses or to other pathogens.

Roles & Responsibilities

A. All Patient Care Staff

- All staff should comply with this policy and report any hazards or incidents immediately to their supervisors, IPC and HSE.
- Should be aware of the risks posed by handling
- Assess the degree of contamination and formulate a plan for the action required and Close the area, post a “DO NOT ENTER”
- Assemble a spill response and cleanup team

B. Hospital management:

- Provide all required resources for the implementation of this policy

C. Departmental Management

- Comply with this policy.
- Education and training of staff on the policy and ensuring all staff read and understand this policy.
- Ensure cleaning equipment (Biological spill kit) and PPE is available for staff.
- Regular checking availability of Biological spill kits in the ward.
- Complete an Incident Form in an adverse event system

Materials:

All work locations where employees may come into contact with blood or other potentially infectious material must have blood spill biohazard equipment/kits available to safely and effectively clean up any spills. This kit must include the following:

PPE (gloves, apron), Absorbent material (cotton, powder, tissue, yellow waste bag), Signing or yellow tape, Disinfectant, Tools (brush, small sharp container, tongs)

Procedures:

A. Spot Cleaning Blood and body fluids

- Wear disposable gloves.
- Wipe up the spot immediately by using a tissue or absorbent paper towel.
- Then clean with warm (not hot) water and detergent.
- Discard contaminated materials as biological waste.

- Take off and dispose of gloves with biological waste then wash hands with soap and water.

B. Small Spills (up to 10 ml)

- Isolate the area and move patients away from the area of the spill.
- Provide cleaning materials and equipment.
- Wear disposable gloves, if risk of splashing use eyewear protection or a plastic apron.
- Remove sharps by using forceps and discard into sharps biohazard waste.
- Apply HAZTAB and immediately cover the area with an absorbent paper towel.
- Contact housekeeping to disinfect the area.
- Discard contaminated materials and biological waste.
- Wash hands with soap and water.

C. Large Spills (greater than 10 ml)

- 1- -Person in charge must evacuate the contaminated area if necessary.
- 2- Decontaminate the eye and skin of exposed personnel immediately if need.
- 3- Control the traffic by using physical barriers e.g. chair
- 4- Inform the people that there is a spill and use signage (e.g. spill or wet floor).
- 5- Inform housekeeping, Infection control, and HSE if necessary
- 6- Apply HAZTAB granules on the spill and cover it with a paper towel.
- 7- Contact housekeeping to disinfect the area
- 8- The cleaner should put on appropriate PPE including gloves and an apron. For highly infectious material e.g. VHF use full PPE (gloves, gown, mask, and goggles)
- 9- Use forceps, a plastic scoop, or other mechanical means to remove broken glass or sharp objects from the spill area.
- 10- Never pick up sharps with hands.
- 11- Take care not to create aerosols.
- 12- Place sharp objects carefully in a sharps container.
- 13- Pick up all absorbent materials and carefully place them in a yellow bag for disposal.
- 14- Disinfect the area with 10,000 ppm chlorine solution(HAZTAB)
- 15- Remove PPE and place in a yellow bag for disposal.
- 16- Seal the yellow bag.
- 17- Wash hands thoroughly with soap and water.
